

3c Design a sea creature - Example of a dolphin

Where does it live?

Dolphins live in the water and come to the surface to breath air.

What does it eat and how?

Dolphins love squid and fish which they eat whole after grabbing them with their teeth.

How does it move?

Dolphins swim by moving their tail up and down. They use their fins to steer.

Extra information:

Dolphin babies (calves) are born into the water and can swim straight away.

Special features:

Dolphins are streamlined so they can swim fast.

How does it escape being eaten?

Dolphins listen carefully to noises in the sea and swim away fast if they are scared.
